

Anti-Bark Collar Manual

Model Number: PD 258

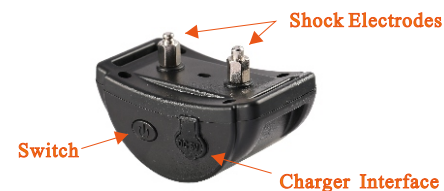

Please read this entire guide before using!

Main Features:

- 1) With battery charging circuit, energy-saving design, and automatically self-protective features.
- 2) Not being easily disturbed by other noises.
- 3) Model "L" is suitable for most middle-large size dogs, and Model "S" is for most middle-small size dogs.

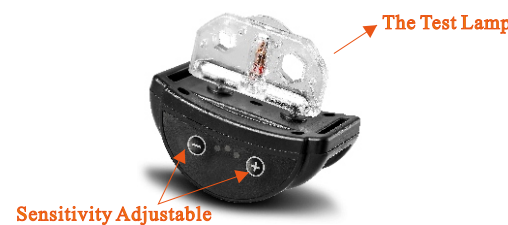

Switch:

Press the button shortly to turn on and continuously press one second to turn off.

How to adjust sensibility:

- 1) PD 258 sensitivity can be adjusted, and the users can adjust it according to the dogs barking noise.
- 2) The sensitivity can easily be adjusted with five levels, and the default level is three. Press "+/-" button, it will "bleep", and the higher the sensibility, the easier it works.

Static test :

Put the white test lamp on the two electrodes of the anti-bark collar, and then blow into the sensor located in the middle or simulate loud dog barking, after the anti-bark collar works third times, the test lamp will gleam.

Training Instructions:

- 1) When dog barks, the anti-bark collar will alarm for 2 seconds.
- 2) Within 30 seconds if the dog barks twice, the anti-bark collar will alarm for 3 seconds.
- 3) Within 30 seconds if the dog barks third times, the anti-bark collar will alarm for 5 seconds, and it will slightly static shock the dog for punishment training, and encourage the dog remember the alarm sound in order to make the dog stop barking once hearing the alarm.
- 4) The same training will continue 7 times. The first and second times are only alarm sound, and if the dog continues barking, it will trigger the third and seven times alarm static shock. The

static shock intensifies every time in order to correct. Don't worry and the static shock won't hurt the dogs .

5) The dog will enhance the memory every time the static shock intensifies, and will quickly understand the shock as punishment because of its barking. There will be very good effect after sometime training.

Automatically self-protective model :

- 1) No matter how many times anti-barking collar works, it will automatically reset after the dog stops barking for 30 seconds.
- 2) In order to protect the dog, if anti-barking collars continuously works for 7 times, the guiding light will quickly twinkle, and if the collar stops works for 1 minute, it will switch to stand by model. It's very friendly and effective with this gradually enhancing alarm sound and static shock technology.

Battery condition :

- 1) This anti-barking collar is cycle chargeable, and when charging, it will twinkle red light, and when fully charged, the light will not twinkle but stay red.
- 2) When battery low, the anti-barking collar will shut down automatically, and please charge in time.

Cautions:

Please use USB charger with below parameters (This product is chargeable with mobile charger or computer USB interface, and please double check below parameters before charging).

Input:100-240V~50/60HZ
Output :5V 1000 mA (or 300mA/500 mA)

Strip:

- 1)Please cut the strip properly if too long.
- 2)Please don't tie the leash with the anti-barking collar strip.
- 3)Please put the collar under the dog neck, and adjust the strip to one finger space. If too loose, it will highly affect the static shock.

Safety Instructions:

- 1)Please prevent dogs bite the anti-barking collar, and this product is produced with non-digestible plastic and electronic components. If by any chance the dogs swallow it, please see a vet immediately.
- 2)If too tight, long time friction between electrodes and the skin will cause erythema, please take off the collar immediately. To avoid skin infection, please re-use the collar after the erythema disappears.
- 3) Please periodically check the dog neck skin, if observe any side effect like allergy, erythema, bed sore and etc. please stop using and see a vet immediately.
- 4)When the dog barks strangely, please stay away from it to avoid very few dogs biting people due to first experience of the static shock. And after it calms down, people can get close.
- 5)Anti-barking collar is only for pets, and please don't toy it with children.

Reminders:

- 1)Please prevent the anti-barking collar from water.
- 2)Please install one pair of proper length of electrodes and make sure it's directly contacting with the dog skin. The hair between electrodes and skin will reduce the static shock effect. If necessary, please trim the hair under the dog neck to guarantee proper contact.
- 3)Very few dogs will respond intensively when first wearing the anti-barking collar due to the static shock, and some will bark loudly. With many years experience, these behaviors are normal and it will need some time to get used to it.
- 4)Usually the dog will reduce barking frequency after several days of wearing anti-barking collar, while the training isn't finished. Smart dogs will try to bark again. So please don't stop training too early, otherwise early stage training will be no meaning.
- 5)The anti-barking collar isn't perfect, although PD258 with the most update technology, it can distinguish precisely the dog barking sound and other noises. Dog over scratching or intensive impact can rarely trigger it to work. At this time, the dog may have flea or ear mites. Please check with a vet if this happens.
- 6)If any more questions, please contact us or consult our distributors.

The device has been approved for use in EU countries and is therefore provided with the **CE mark**. All necessary documentation is available on the website: www.electric-collars.com
Changes to technical parameters, properties and printing errors reserved.
