AXLE POSITION
LO

AXLE POSITIONS

HI —
This position will lower the cockpit, steepen the head angle and result in shorter trail. Perfect for out of the saddle sprints, steep climbs and general hammering.

— **LO**
This position gives the bike a higher front end, slacker head angle and longer trail. Ideal for comfortable long distance riding.

Remove the axle

Unscrew the chip securing bolt

Change chip orientation to LO axle position

Screw the chip securing bolt

Remove brake caliper

Remove TwinTip HI position adapter

Tighten the brake caliper
