Attach an credit card here
to make sure the size chart
is printed at actual size.

SIZE GUIDE

- 1. Print this page at its original size** (100 % setting). Do not use page fit or margins. Verify the correct scale by placing a credit card on the marked rectangle. If it fits exactly, you got it right.
- 2. Fold the paper** according to the marked line at the heel and place it on a flat surface - folded part against the wall.
- 3. Stand on the template** so that **the heel touches the wall**. The lines on the paper show the length of the inside insole of the shoe. Remember to leave a small space (0.5 cm to 1 cm) between the longest toe and the size line - this is how you will find the ideal size.
- 4. We recommend measuring both feet.** If your size is between two numbers, choose the larger one. For individual advice, you can send us photos of the feet attached to this template via www.anglesbarefoot.com/Contact
