

Self adhesive wallpapers

Self adhesive wallpapers or so called self adhesive foils are a quick choice when beautifying your homes. Wallpapers of this kind are ready for application almost immediately. After **preparing the surface**, where you can use the same 3 steps as when gluing wallpaper to umakart you can start gluing! You will need scissors, a ruler, a pencil, a cloth or a squeegee and a needle. In some cases, water is also part of the work equipment, but this depends on the foil itself. The necessary **accessories** can also be found in **our e-shop**. But let's start introducing self adhesive wallpaper. We have prepared a **procedure** for you on how to properly apply **self adhesive wallpapers** after surface treatment.

1. Check the pattern and color of the self adhesive wallpaper. Think about where you want to place the self adhesive wallpaper.
2. If you cover a larger area, we recommend moistening the area with water. Then first remove about 10 cm of the reverse side of the paper and place the "exposed" foil in the designated place. Pay attention to the type of a self adhesive wallpaper! Some types are glued without the use of water, for example we do not use water on absorbent substrates and imitation of metal wallpaper.
3. Peel off the back with one hand and gradually smooth the wallpaper with the other hand. We recommend balancing it from the center to the edge. Use a soft cloth if necessary. If a wallpaper is uneven, gently pull it back without tensioning, and glue it repeatedly. Continue with gluing.
4. You can remove the bubbles by gently pushing the air from the center to the edges. If necessary, puncture the air bubbles with a needle and expel the air.

We have a few **more tips** for you that you should know before gluing. Always keep at least a few millimeters before gluing, which you will cut off after gluing. Self adhesive wallpaper can be leveled only during its gluing, after a few hours it is already firmly glued. If the foil is creased, we recommend that you remove it and stick it again without stretching. Self adhesive wallpapers can be cleaned with soapy water. You can remove wallpapers by gently warming them up. If you can't imagine the application of self adhesive wallpapers, we enclose the **video** as a demonstration.
